

Here 's the hardware functional summary translated into concise English descriptions:

- 1. **0-20mA Analog Signal Acquisition**
 Supports analog input ranging from 0-20mA for precise current measurement in industrial applications.
- 2. **0-5V Analog Signal Acquisition**
- Captures analog voltage signals between 0-5V, suitable for low-range sensor integration.
- 3. **0-10V Voltage Output** Provides a configurable analog voltage output from 0-10V for controlling external devices or calibration purposes.
- 4. **Current Transformer Signal Detection** Monitors AC current via a current transformer, enabling power consumption or fault detection in electrical systems.
- 5. **IIC Expansion Interface** I²C bus interface for connecting external peripherals \(e.g., sensors, memory modules\) with SDA on GPIO4 and SCL on GPIO5.
- 6. **SHT3X Sensor Detection Interface**
- Dedicated I²C port for SHT3X-series temperature and humidity sensors, ensuring accurate environmental monitoring.
- 7. **Ethernet Interface**
- Enables wired network connectivity for data transmission, remote control, or cloud integration.
- 8. **RS485 Interface (RX_GPIO14, TX_GPIO13)** Serial communication interface for long-distance, multi-drop industrial networks (e.g., Modbus RTU).

- 9. **HMI Serial Port (RX_GPIO15, TX_GPIO16)**
- UART interface for connecting to Human-Machine Interface displays or terminals.
- 10. **Infrared Transmitter (GPIO32)**
- Controls an infrared LED for remote control or IR-based communication.
- 11. **Infrared Receiver (GPIO33)**
- Detects incoming infrared signals for remote control or data reception.
- 12. **Buzzer (GPIO12)**
- Generates audible alerts or tones for system feedback.
- 13. **8-Channel Relay Output (IIC SDA-GPIO4, SCL-GPIO5)**
- I²C-controlled relay array for switching high-power loads (e.g., motors, solenoids).
- 14. **8-Channel NPN/PNP Signal Inputs (IIC SDA-GPIO4, SCL-GPIO5)**
- I²C-based digital input module supporting both NPN and PNP sensors for industrial automation.
